

HakTrap™

**INSTALLATION
QUICK-START GUIDE**

HakTrap

Designed specifically for protecting your internet-connected home and home office.

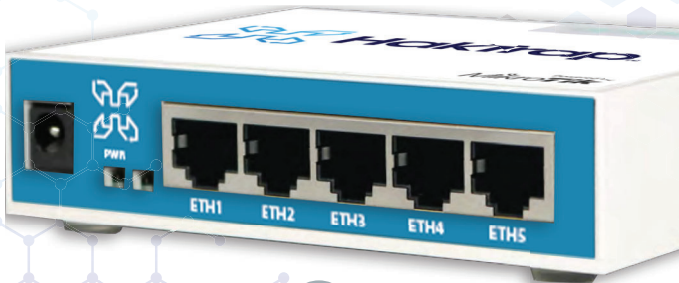

Built for the Intelligence Community by the Intelligence Community, now available to the general public. Congratulations on taking the step to protect your home from today's threats and the threats of the future.

1. Power Up

Give your HakTrap router 2-3 minutes to boot completely.

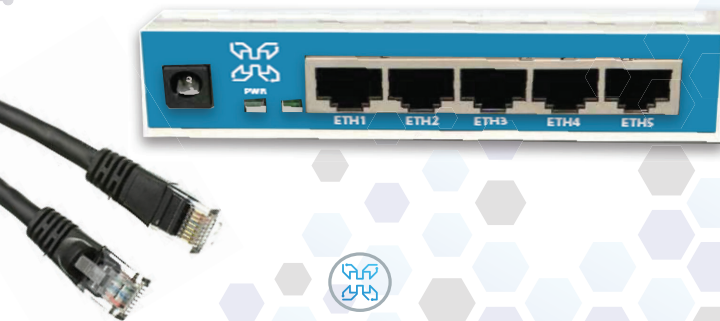

You'll know when it is done when you hear a second "beep".

2. Connect to the internet

Connect the provided black cable to “In” port (ETH1) on your HakTrap router.

Connect the other end of the black cable to the internet port on your cable modem or fiber router.

3. Connect your network

Connect the white cable to the “Out” port (ETH2) on the HakTrap router and the other end to the WAN port on your router, switch, or next network device.

4. Connect to HakTrap

Connect the blue network cable to the “Service” port (ETH3) on the HakTrap router and the other end to any open LAN or Ethernet port on your router, switch, or next network device.

You are all set!

Please note...

Your internet will be down for a few minutes while you are setting up your HakTrap router.

Once your device is activated you will receive login information via email to the reports portal.
